This magnetic slime won’t stick to your refrigerator, but the iron filling will allow you to pull it in any direction with an ordinary magnet—just like Magneto!

Make sure to get help from your adult with this activity.

**YOU WILL NEED...**

- 4 ounces white glue
- 1 1/2 cups water
- 1 teaspoon Borax
- 2 teaspoons black iron oxide

**GET CREATING!**

1. Mix the glue and 1/2 cup water in a small bowl.

2. In a larger bowl, combine the Borax with 1 cup water, stirring until the Borax dissolves.

3. Pour the glue mixture into the Borax mixture and stir until it reaches the consistency of slime. (There may be extra water in the bowl.)

4. Mix the black iron oxide into the slime, kneading until evenly distributed.

5. When you are not playing with it, store your slime in zipper bag or sealed container to keep it from drying out.
